

\*\*\*\*ATTENTION MILWAUKEE GREASE GUN USERS\*\*\*\*

The standard LockNLube® Grease Coupler has a 1/8" NPT hose connection. This will be compatible with all US grease guns EXCEPT SOME of the 18 volt Milwaukee's.

It appears that Milwaukee has imported a batch of 18 volt guns that have 10x1 Metric thread on the coupler end of the hose. There is no way to tell what the thread is without taking off the coupler and then test fitting a known 1/8" NPT onto the hose end to see if it works. If the known 1/8" NPT does not thread on, that likely indicates that the thread is the 10x1 Metric.

There are indications that the most recent Milwaukee's are now coming through with 1/8" NPT and not the 10x1 Metric.

If you use a Milwaukee Grease Gun and would like to purchase a LockNLube® Grease Coupler, please take the following steps:

1. Determine the thread type on your grease gun - your grease gun may have standard 1/8" NPT, in which case you can purchase a standard LockNLube® Grease Coupler.

2. If your Milwaukee Grease Gun has metric thread, you have two options:

(a) Replace the original hose with a new Milwaukee hose Part # Milwaukee 49-16-2647. The new replacement hoses are 1/8"NPT. The thread size is printed right on the front of the package. A 1/8" NPT hose will work with a standard LockNLube® Grease Coupler.

(b) Contact LockNLube by calling 603-795-2298. We now carry couplers with Metric thread, and will be more than happy to help work through this problem with you.
